Do-while loop

1. exit control loop
2. At least one time the block will be executed.
3. foo - while loop entry controlled loop
if condition is true - the block will execute.

Question

Consider the following program

```
##include<stdio.h>
int main() {
    int i=3;
    do {
        ++i;
    } while(i++<=9);
    printf("%d", i);
    return 0;
}

Question

```
#include <stdio.h>
int main() {
    int i, j=10, k=10;
    for (i=10; i<=200; i++) {
        printf ("\nLine 1");
    }
    do {
        printf ("\nline 2");
        j = j+2;
    } while (j<=200);
    while (k<=200) {
        printf ("\nline 3");
        k = k+3;
    }
    return 0 ;
}
```

$$\frac{200 - 10 + 1}{2} = 191$$

$$\left\lceil \frac{200 - 10 + 1}{2} \right\rceil = 96$$

$$\left\lceil \frac{191}{3} \right\rceil = 64$$

The number of times line 1 printed is x , number of time line 2 printed is y and number of times line 3 printed is z then which of the following is TRUE ?

(A) $x=y=z$

(B) $x>y>z$

(C) $x<y<z$

(D) $x=y<z$

Question

```
#include <stdio.h>
int main() {
    int i, j=10, count =0;
    for(i =1; i<=3; i++) {
        do{
            printf("I am good Student");
            j = j+10;
            count++;
        }while(j<=200);
    }
    return 0 ;
}
```

The number of times printf executed is _____

$$\begin{aligned} i &= 1 \quad \rightarrow \quad \lceil \frac{200 - 10 + 1}{10} \rceil = \lceil \frac{191}{10} \rceil = 20 \\ &\qquad\qquad\qquad j = 210 \\ i &= 2 \quad \text{1 time} \quad j = 220 \\ i &= 3 \quad \text{1 time} \quad j = 230 \\ &\qquad\qquad\qquad \overbrace{\hspace{10em}}^{22} \end{aligned}$$

Question

Consider the following program segment

```
#include<stdio.h>
int main() {
    int x, i, j;
    x = 20;
    for (i = 0; i < 20; i++) {
        j = i+1;
        do{
            x+=4;
            j++;
        }while(j<18);
    }
    printf("%d", x) ;
}
```

`break, continue, goto`

`is jump statement`

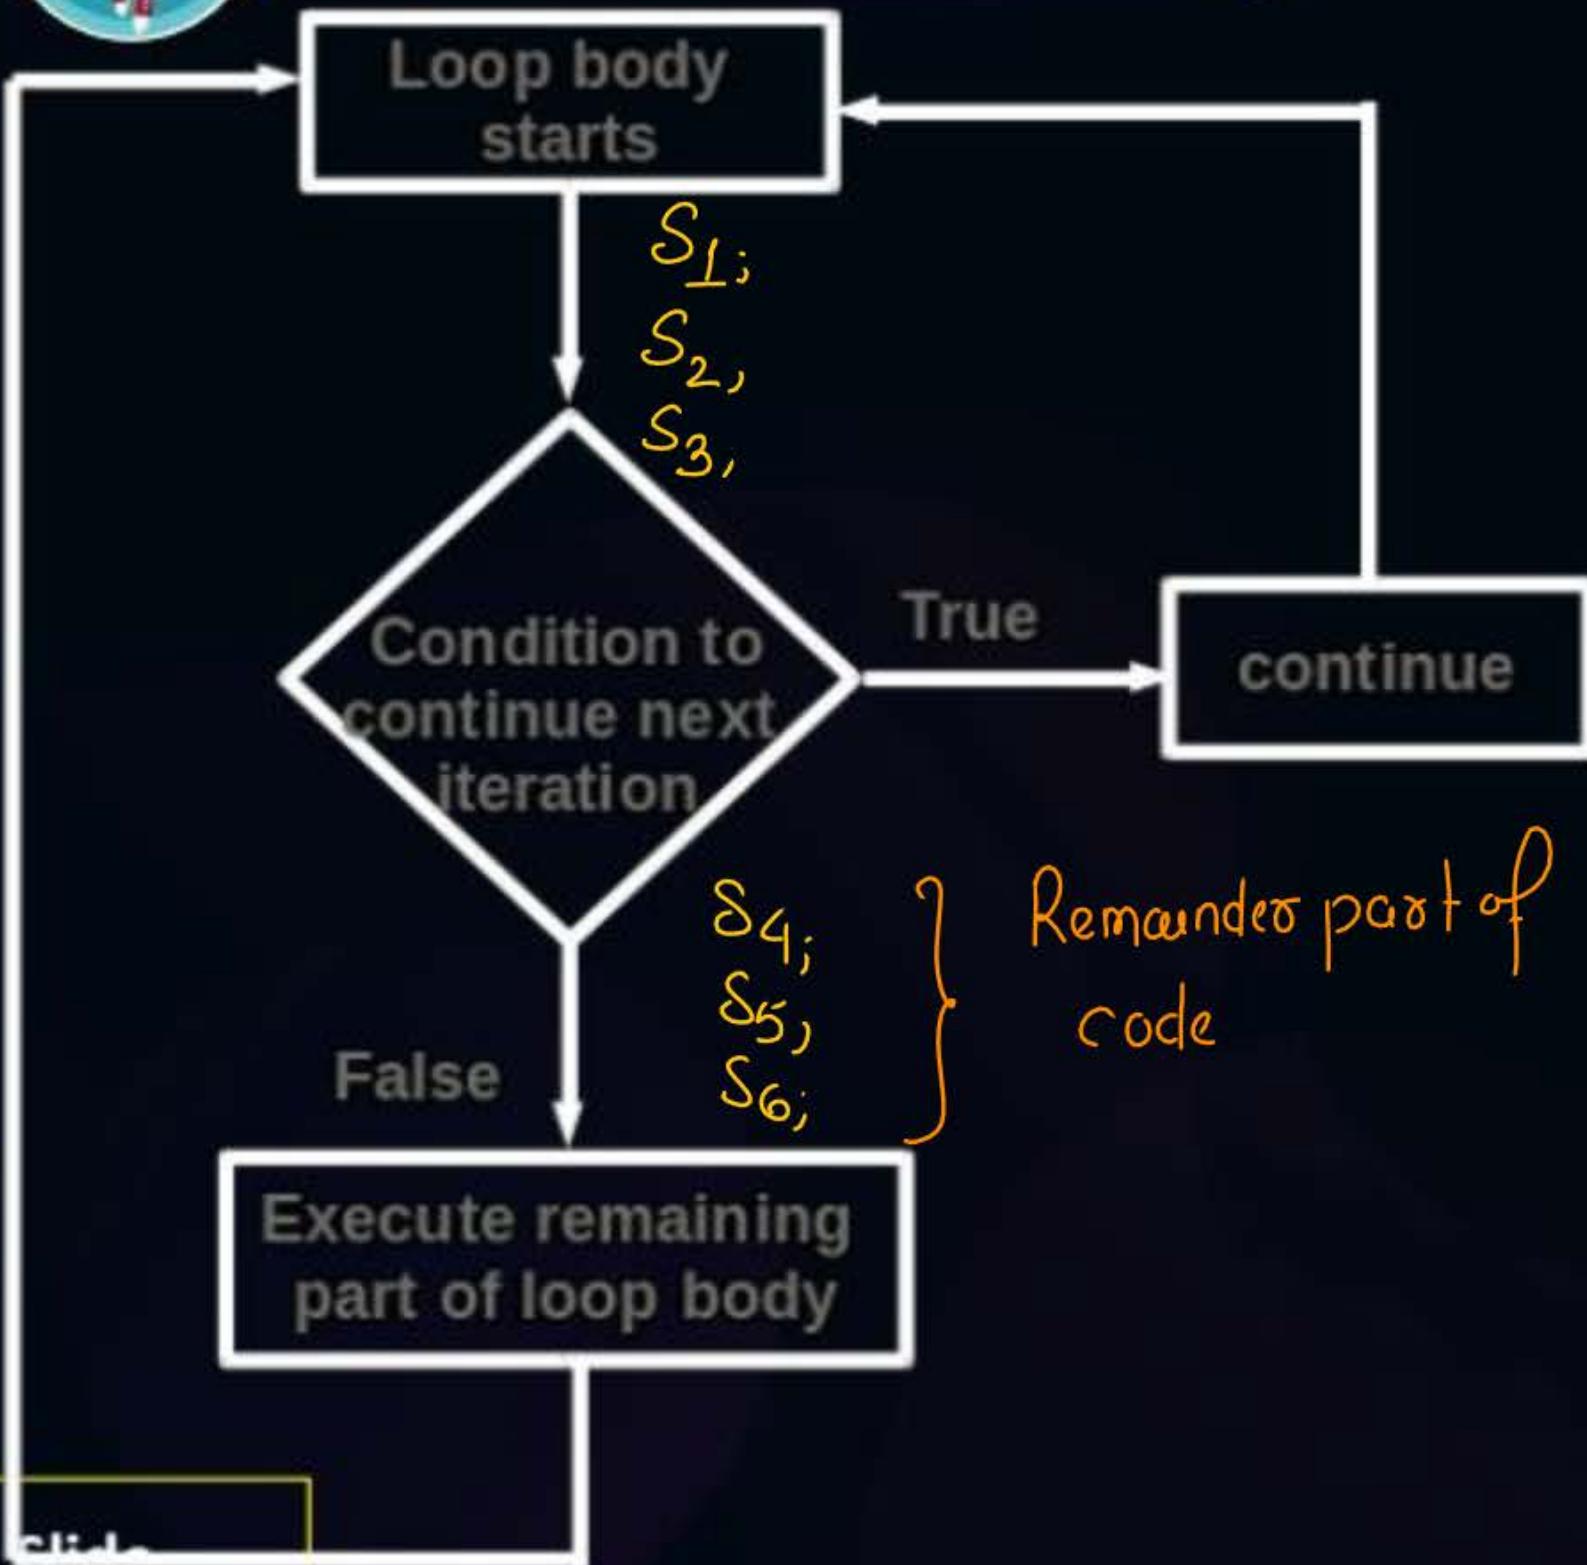

Break

- * Break used with Loops and switch
- * if condition is TRUE then control transfers to outside block of switch/Loop in which break is used.
- * if multiple blocks are present then break causes control transfer for the block in which its used.

Continue

- * if condition is true then continue causes SKIP remainder part of Loop and check the condition before executing the block.
- * continue does not end the Loop

 Question: Continue

```
#Q. #include<stdio.h>
void main () {
for (int i = 1; i <= 10; i++) {
    if (i > 5) {
        break;
    }
    printf("%d\n", i);
}
